THE **NEW** ITALIAN GAS PIPING SYSTEM

THE **NEW** ITALIAN GAS PIPING SYSTEM

The **Pexal** pipe system has been developed to speed installation and increase functionality: with just one type of pipe and one type of fitting you can install your gas system.

The **Pexal** multi-layer pipe offers the advantages of both metal and plastic.

Metals' negative aspects such as corrosion, toxicity, scaling and rigidity are eliminated by the PE-X layers surrounding the pipe.

PIPING SYSTEM

A new piping system, with all the advantages of plastic — fast and easy to install.

Guaranteed to reduce the time and cost associated with conventional copper piping.

The **Pexal** piping system has been certified suitable for gas installations.

Pexal pipes shall be used with the appropriate DR brass fittings for all applications with Natural Gas and LP Gas.

Contact between the brass fitting and the aluminium pipe is prevented thanks to a seal which fits between the end of the pipe and the brass fitting. This means that the system is entirely protected against electro-chemical corrosion.

Pexal is fully approved to AS 5601 for natural gas and LP gas applications.

Licence number IP00083 AS4176 SPEC 438

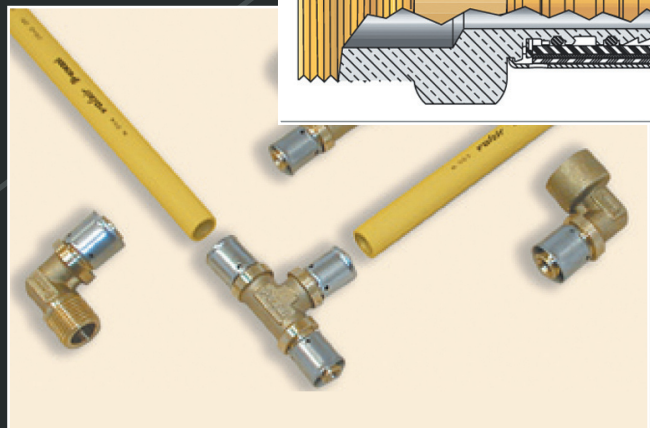

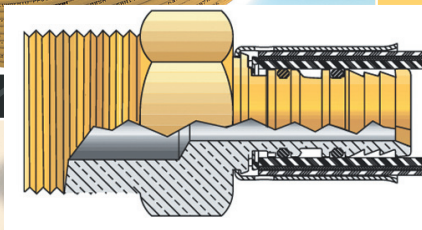

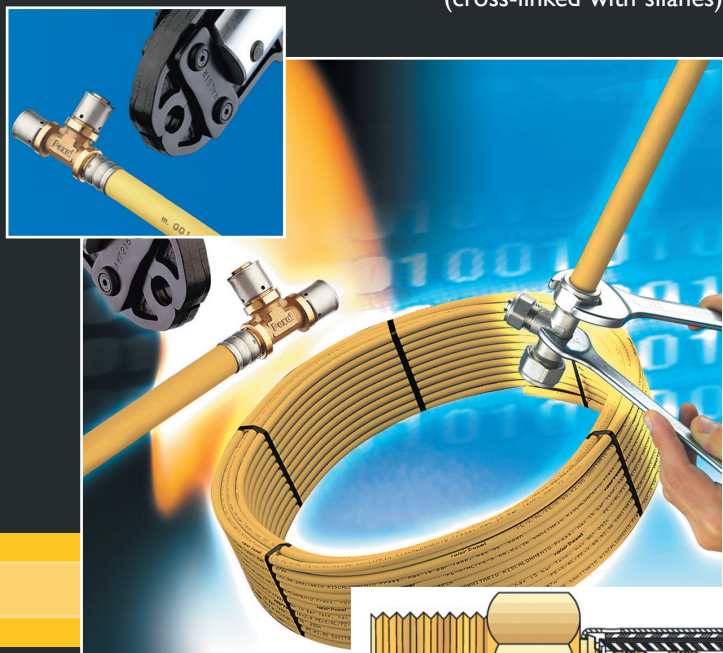

The **Pexal** multi-layer pipe is constructed of:

Two binding layers of adhesive bind the metal pipe with the two layers in cross-linked polyethylene

An **intermediate layer** of longitudinally butt-welded food grade aluminium

An **inner layer** of cross-linked polyethylene PE-XB (cross-linked with silanes)

An **outer layer** of cross linked polyethylene PE-XB (cross linked with silanes) Ral 70 35

Simply crimp and forget - No brazing required
